Situation & Project Goals

Situation

1. Game of thrones is one of the most popular tv show based on the book series «A Song of Fire and Ice» with large number of characters and battles between them.
2. The need of the audience (there may be different reasons) to get some special tool that provides them to be able to predict something they want.
3. Possibility to predict outcomes of the next series could be usable for some persons or organizations (for example: betting shop).

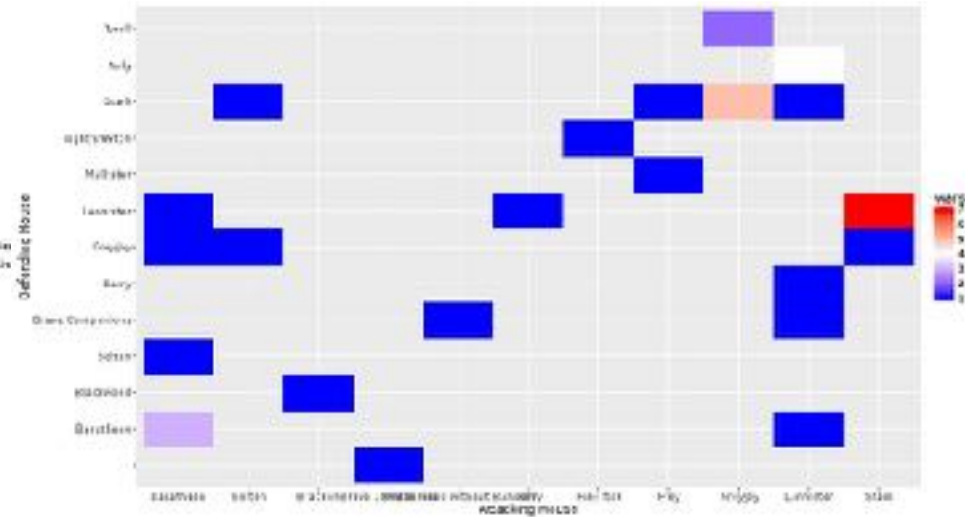

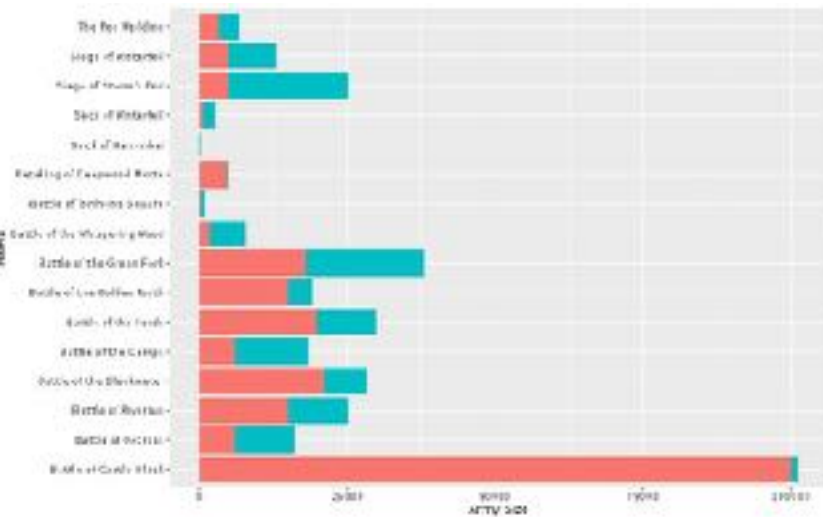

Goals of “The game of thrones”

1. Find, prepare and visualize data.
2. Define «the best» house, king's with largest attacker sizes etc.

Executive Summary

Purposes of our project have been reached.

- **The way to compare different houses according to its parameters was chosen**

Why this project should be supported?

- «Game of Thrones» has a large number of fans and with the help of the survey we can successfully participate in the rates.
- This research can help to create successful betting shop.
- This survey with supporting can be developed for predicting not only the «Game of Thrones».

Future plans

- Promote this project
- Develop the project to the project with more functional tools and make it multipurpose
- Create the betting shop
